St John Baptist De La Salle Catholic School, Addis Ababa Grade 10 Physics Final Examination 2nd Quarter

January, 2022

Notes, and use of other aids is **NOT** allowed. Read all directions carefully and write your answers in the space provided. To receive full credit, you must show all of your work.

Useful Constants

• $\mathbf{e} = 1.6 \times 10^{-19} \mathrm{C}$ - elemen	tary charge $\mathbf{m}_e = 9.11 \times$	10^{-31}kg - mas	s of an electron	
• $\mathbf{m}_p = 1.673 \times 10^{-27} \text{kg} - \text{m}$	ass of a proton $\mu_0 = 4\pi \times$	$10^{-7} \frac{H}{m}$ - perm	neability of free space	
• $\epsilon_0 = 8.85 \times 10^{-12} \frac{F}{m}$ - perm	nitivitty of free space $\mathbf{G} =$	6.672×10^{-12}	$\frac{Nm^2}{kg^2}$ - gravitational constant	
• $N_A = 6.022 \times 10^{23} \frac{1}{mol}$ - A	vogadro's number $\mathbf{a}_g = 10$	m/s^2 - accelera	ation due to gravity

Questions				
1. List two factors that affect	the capacitance of capacito	ors and how.		
2. An electron enters a region	of uniform electric field of	$5 \times 10^2 \text{ V/m. V}$	What is the force on the electron?	
3. What is a conservative force	e?			
4. What is moment of inertia?				
5. A point charge Q_1 is at $x = $ point charges if the absolute			= 2. What is the relationship betwee = 4?	en these two
6. What is terminal voltage?				

9. Electric companies usually list their billings in amounts of cents/KWh. In this quantity, what is KWh a unit of:

7. A simple circuit consists of a load resistor of 20Ω connected to a battery of 36V EMF. If the current through the circuit

is 3.2A, what is the internal resistance of the battery?

8. How much is one electron-volt in Joules?

Multiple Choice Questions

- 10. A $2\mu F$ and $1\mu F$ capacitors are connected in parallel and a potential difference is applied across the combination. The $2\mu F$ capacitor has: A. half the charge of the $1\mu F$ capacitor B. twice the stored energy of the $1\mu F$ capacitor C. twice the potential difference of the $1\mu F$ capacitor D. half the stored energy of the $1\mu F$ capacitor E. None of the above
- 11. A tangent line to an equipotential surface and the electric field due to the same charge at any point must be:

A. Parallel B. Perpendicular C. Opposite in direction D. They don't have any relationship E. None of the above

12. Which of the following is true about resistivity and conductivity?

A. They are reciprocals of one another B. They are dimensionless quantities C. They have direct relationship

- D. They have the same SI units E. None of the above
- 13. If two, infinitely long parallel conducting wires carry the same current and the force per unit length on each wire is 2×10^{-7} N/m, the current in each wire is defined to be:

A. 1 Ampere B. 1 Coulomb C. 2×10^{-7} Coulomb D. 2×10^{-7} Ampere E. None of the above

14. The angular impulse experienced by a body is equivalent to the change in:

A. Mechanical energy B. Linear Momentum C. Angular Momentum D. Relativistic Kinetic Energy E. None of the above

15. A 18V battery is connected to a 2μ F capacitor. How much electric energy can be stored in the capacitor?

A. $1.62 \times 10^{-5} \text{ J}$ B. $8.1 \times 10^{-5} \text{ J}$ C. $1.62 \times 10^{-4} \text{ J}$ D. $8.1 \times 10^{-4} \text{ J}$ E. None of the above

16. The two ends of a 4Ω resistor are connected to a 8V battery. What is the total power delivered by the battery to the circuit?

A. 4 W B. 16 W C. 32 W D. 64 W E. None of the above

17. Gravitational potential energy an energy of a charge possessed because it is in the:

A. region of other masses B. vacuum C. region of zero electric field D. region of other charges E. None of the above

18. Two resistors R_1 and R_2 are connected in series. If $R_1=2R_2$, which of the following is true?

A. $V_1=2V_2$ B. $V_1=\frac{1}{2}V_2$ C. $I_1=2I_2$ D. $I_1=\frac{1}{2}I_2$ E. None of the above

19. A 6A current is flowing through a Copper conductor $(n = 8.5 \times 10^{28} m^{-3})$ that has a cross sectional area of 1mm². What is the drift speed of the electrons in this conductor?

A. $4.41 \times 10^4 m/s$ B. $4.41 \times 10^{-4} m/s$ C. $4.41 \times 10^{-8} m/s$ D. $4.41 \times 10^{-2} m/s$ E. None of the above

20. All conductors obey Ohm's Law.

A. True B. False C. None of the above

21. What is the potential at a distance of 10m from a charge 0f 5.0C?

A. $-4.45 \times 10^{-9} \text{ V}$ B. $+4.45 \times 10^{9} \text{ V}$ C. $-4.45 \times 10^{-9} \text{ V}$ D. $-4.45 \times 10^{+9} \text{ V}$ E. None of the above

22. A charge of $Q_1 = 10 \times 10^{-9}$ C is placed at the origin while another charge of $Q_2 = 10 \times 10^{-9}$ C is placed at (0,6). What is the electric force on a third charge $Q_3 = -2.5 \times 10^{-8}$ C if it is placed at (4,3) due to Q_1 and Q_2 ?

A. 1.08×10^{-7} N, positive Y direction B. 1.42×10^{-7} N, positive X direction C. 1.42×10^{-7} N, negative Y direction

- D. 9.00×10^{-7} N, positive Y direction E. None of the above
- 23. There are two parallel parallel charged plates in some region. A positive charge of 1.0×10^{-4} C is on the negatively charged plate. If the potential on the positively charged plate is +10KV and the potential on the negatively charged plate is -10KV, how much work is required to move the charge from the negative plate to the positive plate?

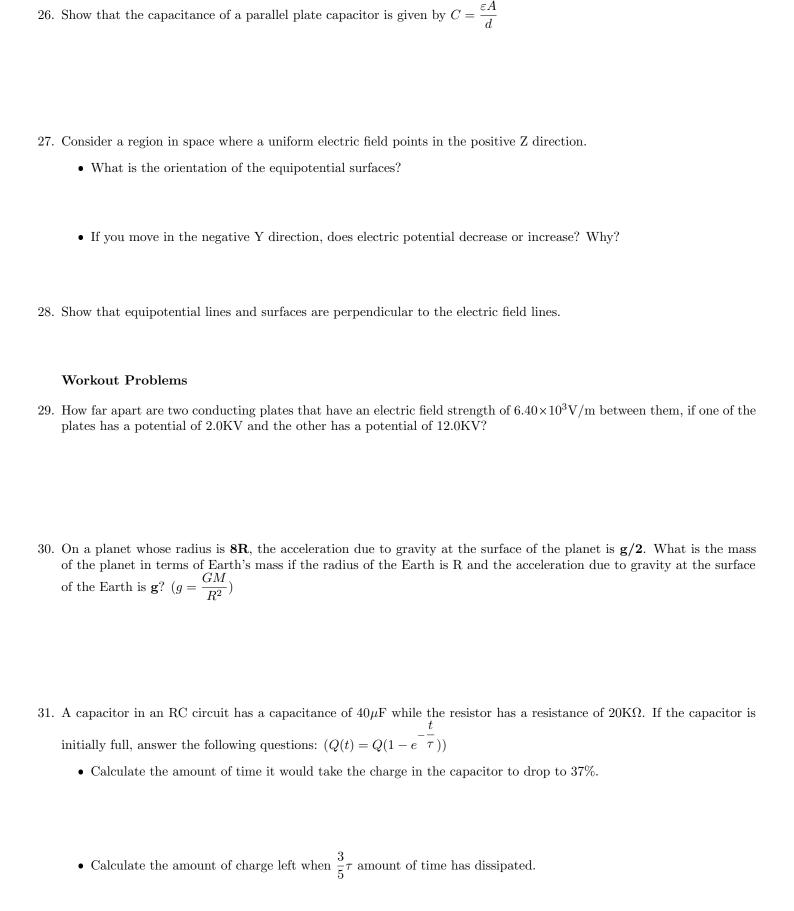

A. 2.0 J B. 0.0 J C. 4.0 J D. 1.0 J E. None of the above

24. If the value of acceleration due to gravity on the surface of the Earth is **g**, what will its value be at a height equal to twice the radius of the Earth above the surface?

A. $\frac{\mathbf{g}}{9}$ B. $\frac{\mathbf{g}}{4}$ C. $\frac{\mathbf{g}}{2}$ D. \mathbf{g} E. None of the above

Conceptual & Proof Problems

25. What are the factors affecting the capacitance of a parallel plate capacitor? List each factor and explain the effects of changing the factors on the capacitance.

32. Show that for an RC circuit, the voltage as a function of time while the capacitor is charging is given by:

$$V(t) = V(1 - e^{-t/\tau})$$
